Mountain Weather Forecast

Ground Conditions Supplement

Date Tuesday 13 December. Helvellyn summit at 1205. Full report: The incredibly stable, dry, cold weather continues and, accompanied with light, almost non-existent, winds this has resulted in similarly stable ground conditions with virtually no change since yesterday. With a severe overnight frost at all levels followed by daytime temperatures remaining at or below zero down to valley level there has also been marginal thaw/freeze action. Patches of ice could be found anywhere, but mostly at lower elevations along drainage lines where there has been previous thaw/freeze action. Ice on paths, however, is certainly the exception, rather than the rule. Although snow can be found down to valley level, the main snow line is around 200m. Above 200m paths, ground and rocks are covered by around 1cm to 3cm of soft, normally fairly grippy, snow although below 750m there has been a previous thaw on aspects catching the sun. There were isolated patches of ice on rocks and paths where the snow/frost has been compacted on popular routes.Upland tarns, such as Red Tarn, have frozen with apparently thick ice. There were, however, cracks in the ice some of which were hidden under a light covering of snow, so they are unsafe to walk on.Full winter clothing (waterproofs, extra warm layers, hat & gloves), mountain boots and equipment including torch, map and compass and the ability to use them in potentially poor visibility such as low cloud are all essential to safely enjoy the fells. Extra clothing, though, is not just for safety, but also for comfort as the summit again today was a place to don extra clothing and linger to simply absorb the magnificent panorama. Walking poles to aid stability on slippery paths could also be useful. For those heading above the snowline and attempting, or traversing, steep and exposed routes, such as both Striding and Swirral Edges, microspikes/crampons & an ice axe could be a sensible addition to the rucksack. Hopefully sunglasses will also be essential equipment as they were today! For those interested in the weather stats, the summit air temp of minus 6.3 degrees was recorded in the shade. In the winter sun and with virtually nil winds, it felt around zero – warmer than the valleys! Temperature minus 6.3 degC. Maximum wind speed 3.7 mph. Wind chill minus 9.8 degC. Average wind speed 1.5mph.
